Documentation index

English version. The canonical (Russian) set is ../index.md; both are kept in step and both ship as PDF in ../pdf/.

Question	Document
Run it from scratch	BUILD.md, DEPLOYMENT_PART_B.md
How the application and the scoring work	PROJECT_GUIDE.md, architecture/system-context.md
Why the module boundaries are drawn this way	architecture/system-context.md
Data and schema application	database/schema.md, database/migrations.md
API: conventions and errors	api/conventions.md, `../../backend/openapi.json`
What a particular module does / what to borrow	modules/
Operations, metrics, upgrades	operations/deployment.md, operations/monitoring.md
Accounts and sign-in	AUTH_MODULE.md
Telegram Mini App	TELEGRAM_BOT.md
E-mail	EMAIL.md
AI Analyst and the assistant	AI_ANALYST.md, AI_ASSISTANT.md
Dataset and snapshot	../../dataset/README.md
What proves it works	verification/matrix.md, CI
Code style and lint	development/code-style.md
Gaps found and fixed	audit/portability-audit-2026-10-29.md

Rules

1. `backend/openapi.json` is **generated** (`make openapi`) and checked in CI (`make openapi-check`).
2. `backend/scripts/check_docs.py` verifies live links, that every `AEZA_*` variable exists in `.env.example`, that mentioned routes exist, and that no secret-like examples are present. `scripts/docs-check.sh` adds structure and module-specification checks.
3. A new module without a specification following modules/module-template.md is not considered done — checked in CI.
4. Any document claiming behaviour must have a row in verification/matrix.md: claim → command → CI.

Project control

- `forge.sh` / `forge.bat` start, stop, tail logs, run tests, manage the database and containers in one command; see the README section.
